Final check before go-live

Hi Abhi,

We are very close now, but I have checked the website again and there are still a few points from our previous lists that are not completely finished.

Please use tomorrow for **one final and careful quality check of the entire website**, not only the screenshots and individual examples I send you.

1. Responsive design

Please check the complete website yourself on **desktop, iPad/tablet and mobile**. There are still some elements, text blocks, images, boxes and spacing that are not properly aligned or scaled on different screen sizes.

2. Grey lines / borders

There are still fine grey lines and frames visible in different sections. We mentioned this before. Please remove all unnecessary grey lines consistently throughout the website.

3. German capitalization and spelling

Please check the complete website carefully. There are still several incorrect capitalizations. These are only examples; please check **all headings, texts, buttons and menus**.

“Über Deine Kontaktaufnahme Freuen Wir Uns.”
→ ***“Über deine Kontaktaufnahme freuen wir uns.”***

“Lassen Sie Uns Ihre Idee Begreifbar Machen.”
→ ***“Lassen Sie uns Ihre Idee begreifbar machen.”***

“Doming Und Etiketten”
→ ***“Doming und Etiketten”***

4. Typography / layout

Please check font sizes, bold/regular styles, line breaks, spacing, alignment and content boxes throughout the website so everything looks consistent and professional.

5. Contact form – very important

The contact form must work correctly before we go live. Please test the complete process yourself: fill in and submit the form; make sure the message is actually delivered to my email address; check all required fields and error messages; and check the confirmation after successful submission.

The confirmation should be in German:
“Vielen Dank für Ihre Nachricht. Sie wurde erfolgreich übermittelt.”

Please also make sure that all validation and error messages are in German. The most important point is that a visitor can send the form successfully and that I actually receive the message.

6. Products / navigation

Please check the product menu, product order, links and individual product pages again. There are still a few points from our previous lists that do not seem completely finished.

7. Logoloop® – Gratis-Muster

Please link the **“Gratis-Muster”** button/section directly to the Logoloop Switzerland contact page:
https://www.logoloop.com/de/kontakt/schweiz
Please also test that the link works correctly.

8. Content boxes / layout

Some boxes and sections still look unfinished or inconsistent regarding size, spacing, borders and positioning. Please check these throughout the complete website.

9. Final visual QA

Please go through **every page yourself** and check alignment, spacing, borders, typography, line breaks, image sizes, links, buttons and responsive behaviour.

The screenshots I send are **examples, not a complete list**. We have already discussed several of these points before, and we are very close now. I just want the final details to be properly finished before going live.

It is very time-consuming for me to find every small visual issue individually. I expect your team to do this final quality check yourselves as well.

Once these remaining points are clean and especially the **contact form is tested and working**, we should be ready to go live.

Thank you,
Michael
